# NEWS RELEASE

*June 1, 2015 – For Immediate Release*

## Update: Asbury Road Pavement Project to Begin June 8

DUBUQUE, Iowa – The City of Dubuque will be conducting a pavement rehabilitation project on the section of Asbury Road between Matthew John Drive and J.F. Kennedy Road. The contractor, Iowa Erosion Control, Inc., plans to begin work on Monday, June 8.

Over the past few years, the condition of this section of Asbury Road has degraded due to deterioration of pavement joints. Full-depth pavement patching and dowel bar reinforcement repairs will be made to transverse joints as part of the rehab project. Once pavement repairs are made, the concrete pavement will be resurfaced using a grinding method to provide a smoother ride.

The project is anticipated to be completed by August 7, 2015, weather dependent. No road closures or detours will occur for the majority of this time period, as one lane of eastbound traffic and one lane of westbound will flow at all times. However, near the end of the project, road closures and detours are anticipated for a short duration and the City will provide updates and notifications accordingly. City staff and Iowa Erosion Control, Inc. will work with businesses and residents on accessibility to their respective properties during construction. Any thru traffic is encouraged to use an alternate route during this time as delays will occur.

For more information, questions, or concerns, please contact the City of Dubuque Engineering Department at 563-589-4270.
